

ABSTRACT OF THE DISCLOSURE

A system may comprise at least one device information file that contains emulation information about at least one device and an emulator that is adapted to read the at least one device information file and provide an on-screen display (“OSD”) emulation of the at least one device. A method may comprise the acts of identifying a device information file that comprises emulation information about a set-up procedure associated with at least one device, invoking an emulation of the set-up procedure associated with the device based on the emulation information and providing instruction to a user based on the emulation of the set-up procedure.
